TIRONE PAMA

First Year *Bachelor of Computing Science (Honours)*
Student at the *University of Technology, Sydney*

Dear Sir/Madam,

As a First Year university with no prior job involvement, I may not possess months or even years of work experience to draw from - but I am confident that I possess an array of values and skills that are a great fit for the Forrest Marketing Group. Because of this, being selected as a Lead Generator is an opportunity that I hope I can undertake in order to kickstart a good professional foundation.

Having spent time learning various programming languages and through my applications to notable professional development courses, I have developed a greater sense of proactivity and curiosity with which I hope to be able to contribute to my desired job role.

Through my experience assuming leadership based positions within various clubs and societies over the past two years (such as FOCUS, Peer Support and Hack Club), it is through the latter that I have been able coordinate smooth collaboration and effective communication. Of which I understand their importance in a real-life workplace.

More so, through my experiences coordinating projects, I am equipped with a fundamental knowledge of documenting a project, and time management strategies in order to lead a task to a designated deadline. With a notable example being a Biology-themed tutorial video for my HSC Industrial Technology Multimedia subject (see the linked attachment for documentation).

As such, I wish to be able to be able to utilize my prior experiences and knowledge by aiding a company such as the Forrest Market Group that encourages personal growth; and provides challenges to extend and improve my current skillset. In summary, I am confident that I am an adequate choice for the Team Member and I would like to thank you for taking the time to consider my application.

Sincerely,
Tirone Pama
